How to Install Your SIT Products

Thank you for subscribing to SIT Trading Systems. This guide walks you through getting your indicators and bots into NinjaTrader 8, step by step.

What you need

- **NinjaTrader 8** installed on your computer.
- **Your NinjaTrader account** (the email and password you use to log in to NinjaTrader).
- **The download** from our Downloads page (step 1 below).

After you subscribe

When your payment goes through, you are taken to our **Downloads page**. Your receipt email also has a link back to it, so you can find it again any time.

Your license

At checkout you gave us your NinjaTrader account email. We'll turn on your license for that email, usually within 24 hours of your purchase. If something unexpected comes up, it may take a little longer. We'll email you when your license is active. Your money-back guarantee period starts on the day your license is turned on, not on the day you paid.

- Your license is tied to your **NinjaTrader account email**, not to a computer.
- If the email you gave at checkout is not the one on your NinjaTrader account, email us right away with the correct one.

Step 1. Download the package

1. On the Downloads page, click the download link for the **SIT customer package** (a .zip file).
2. **Do not unzip it.** NinjaTrader imports the .zip file exactly as it is.
3. The package holds every SIT indicator and bot. **Only the products you subscribed to will work** once your license is on. The others stay locked.

If your browser says "Suspicious download blocked": this is a common browser warning for new websites and zip files. It is not a problem with the file.

- **Chrome:** click the download icon at the top right, then choose to keep or download the file anyway.
- **Edge:** click the **…** next to the download, choose **Keep**, then **Keep anyway**.

Step 2. Import into NinjaTrader 8

1. Open NinjaTrader 8.
2. In the **Control Center** (the main NinjaTrader window), click **Tools**, then **Import**, then **NinjaScript Add-On…**
3. Find the .zip file you downloaded (usually in your **Downloads** folder), select it and click **Open**.
4. When NinjaTrader says the import was successful, click **OK**.
5. **Close NinjaTrader and open it again.**

You only need to import once. If we send you a newer package later, import it the same way.

Step 3. Log in with the right account

When NinjaTrader opens, log in with the **same NinjaTrader account email** you gave at checkout. Your license is on that account, so the products only work when you are logged in with it.

When you get our email saying your license is active, **close NinjaTrader and open it again** so it picks up your license.

Step 4. Add it to a chart

Indicators

1. Open a chart (**New**, then **Chart**, then choose your instrument).
2. Right-click on the chart and choose **Indicators…**
3. In the list on the left, find your SIT indicator, double-click it, then click **OK**.

Bots (strategies)

1. Open a chart for the instrument you want the bot to trade.
2. Right-click on the chart and choose **Strategies…**
3. In the list on the left, find your SIT bot and double-click it.

4. On the right, set the **Account**. We strongly suggest a simulation account (such as **Sim101**) to start.
5. Choose your settings, check **Enabled**, then click **OK**.

If you see a license message when adding a product, your license may not be active yet, or you may be logged in with a different NinjaTrader account. Check your login, restart NinjaTrader, and email us if it still does not work.

Step 5. Before you trade

- **Read the Settings Guide** for your product. Every indicator and bot has its own guide on the Downloads page, explaining each setting from top to bottom.
- **Test every change in simulation first.** Get to know how the product behaves with your settings before using a live account.
- **Your settings are your choice.** Default settings are only a starting point, not a recommendation.

Important: turning off a bot

Turning off a bot does not close an open trade. Turning it off (unchecking **Enabled**) stops new trades, but any open position stays open.

- Before turning off a bot, **close or flatten your position first**, then check that you have no open position.
- **Prop firm traders:** make sure you are flat by your firm's required time. Breaking your firm's rules can cost you the account.

Manage your subscription

To update your payment card or cancel, use the **Manage your subscription** link on our Downloads page. To switch plans, email us at **sittradingsystems@gmail.com**. When a subscription ends, the license for that product is turned off.

Need help?

Email us at **sittradingsystems@gmail.com**. Please include your NinjaTrader account email and the product name.

Disclaimer

This guide is for informational and educational purposes only. It explains how to install and set up our products. It is not trading, investment or financial advice, and it does not recommend any setting, market or strategy.

Trading futures and other financial instruments involves substantial risk of loss and is not suitable for every investor. You can lose more than your initial investment. Past performance, whether real or simulated, does not guarantee future results. Simulated and backtested results have limitations and may not reflect real trading conditions such as slippage, commission, liquidity and execution delays.

You are solely responsible for your settings, your trades, managing your open positions, and following the rules of your broker or prop firm. SIT Trading Systems is not responsible for any trading losses, rule violations or account closures, or for losses caused by software errors, malfunctions or defects, connection problems, or platform issues. Always test in simulation before trading with real money, and only trade with money you can afford to lose.
